

Things for people
with disabilities

Exterior lift (disabled only)

This elevator (or lift) is designed for people in a wheelchair.

They are small, withstand about 1.8 tons.

In Ukraine there are not so many of them, about 1000 pieces.

Wheelchair

Wheelchairs are designed for people who have problems in the lower body.

They are improving every year, so that people with disabilities are as comfortable as possible.

Extendable ramp

The ramp in transport is designed for a wheelchair.

So that people could easily enter the bus without problems and otherworldly assistance

Now there are very few in Ukraine, literally 7% of all land transport.

Crutches for the disabled

Crutches are a great solution to help people who have difficulty walking.

Unfortunately, many of them are not comfortable and after very tired hands, in addition, bruises remain.

But, we produce new models.

They are more expensive, but there are comfortable.

Stick for the blind

The cane is used by blind people with the help of this they find their way.

This is a very common thing all over the world.

The old cane was just a stick. Now there are folding canes and canes with a vibrator.

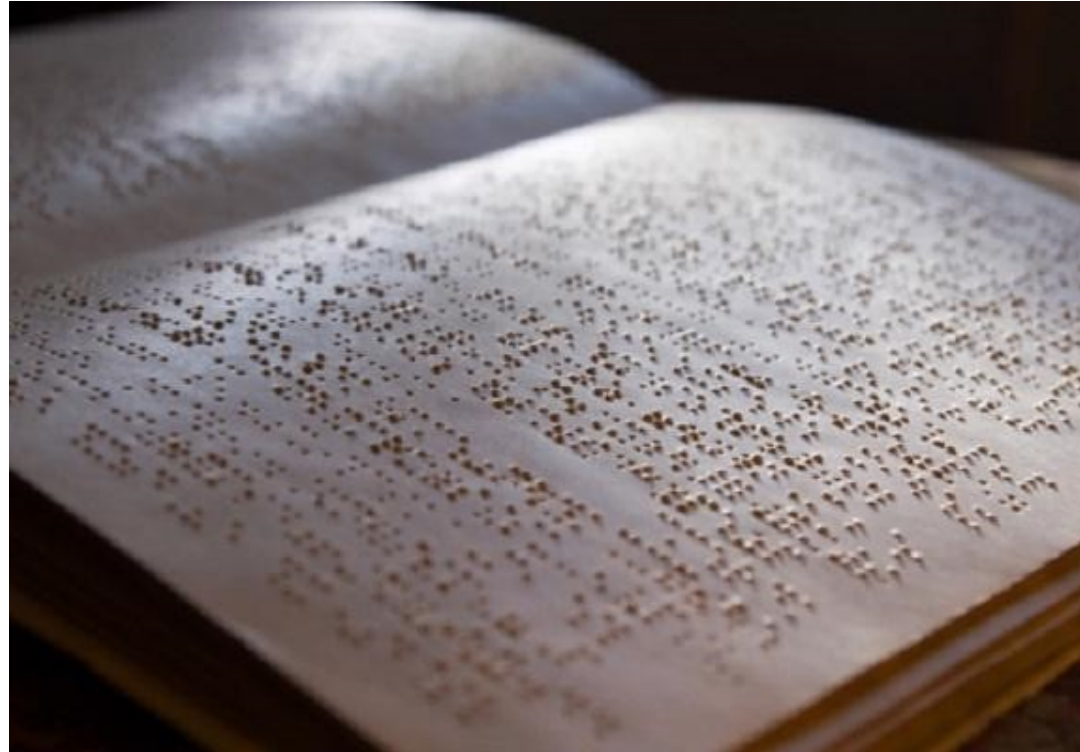

Books for the Blind

Braille has written books for the blind.

People read them by touching every word and letter.

At us in Ukraine these books are not more than a couple of hundred and unfortunately they are all distant from each other, therefore not everyone has the opportunity to read these books.

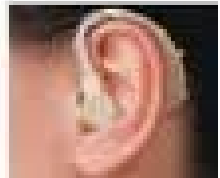

Apparatus for the deaf

The hearing aid is used by people with poor hearing.

They are convenient because you turn it on when you want and at what volume you want.

Accordingly, you hear while you want it, after that you can turn it off.

This is an expensive thing that not everyone can afford.

Armchair-toilet

This thing is very convenient for intimate procedures.

This can be used as a toilet and a bathroom.

This is not very convenient, but still better and more comfortable for people with disabilities than a normal bathroom.

Manual cutlery

Specialized spoon, fork and knife with a non-slip handle and a fixing strap for people with weak motor skills in the fingers or lack of it completely.

Thanks to this,
more convenient and more pleasant eat.
